Art Unit: 2612

1. This application contains claims directed to the following patentably distinct species of the claimed invention: The species of Figs. 15 and 16. In the case, Applicants elect on_e of the species of Figs. 15 and 16; Applicants are require to elect the species of Figs. 11 and 12.

Applicant is required under 35 U.S.C. 121 to elect a single disclosed species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Currently, claims 10 and 33 appear to be generic.

Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant

must indicate which are readable upon the elected species. MPEP § 809.02(a).

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

Upon selecting the species of Figs. 15 and 16, Applicants are required to elect the invention of Group I and Group II as following:

2. Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-19 and 42-27, drawn to a method of estimating motion object using an error function, classified in class 348, subclass 208.12.
- II. Claims 20-41 and 48, drawn to a method of estimating motion by using motion vector, classified in class 348, subclass 155.

Art Unit: 2612

3. The inventions are distinct, each from the other because of the following reasons:

Inventions of Group I and Group II are different and distinct. In the instant case, the inventions of Group I recite a method of estimating motion of a moving object; where the method uses an error function to estimate a motion of an object and the invention of Group II recites a method of estimating motion by using a motion vector associated with an object image. In addition the search for Group I and Group II is different based on classification.

4. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
